

Nicholas Templeman

Founder & Systems Architect — MEOK AI LABS

United Kingdom | nicholas@meok.ai | github.com/meokclaw

Professional Summary

Solo founder and systems architect building sovereign AI infrastructure. 4+ years developing distributed multi-model orchestration systems, local-first inference meshes, and care-aligned AI safety frameworks. Background in full-stack engineering, aircraft systems, and machine learning operations. Built the MEOKCLAW platform entirely from a farm workshop with two MacBooks.

Current Role

MEOK AI LABS — Founder & Lead Developer (2024–Present)

- Architected and built MEOKCLAW: open-source sovereign AI orchestration platform
 - Dual-Mac Inference Mesh: M2 Air + M4 MacBook speculative decoding pipeline (1.5–2.5× speedup)
 - MEOKBRIDGE: Universal connector supporting 9+ backend types (Ollama, MLX, vLLM, OpenAI, MCP, A2A, WebLLM)
 - SOV3 Neural Coordination: Trained MLP models for threat detection, care validation, and partnership analysis
 - 47-agent council system with Byzantine Fault Tolerant consensus
 - i18n guardrails: 15-language safety enforcement with RTL/Unicode attack detection
 - Mobile apps via Capacitor (iOS/Android) + desktop via Tauri
 - All code MIT-licensed; 300+ automated tests (Playwright E2E, red team probes)
-

Previous Experience

Cyber AI Research Institute — SVP & Director (2023–2024)

- Directed research programmes in cyber AI and sovereign infrastructure
- Published daily intelligence briefings and strategic assessments
- Built automated research pipelines and agent swarms for open-source intelligence

Aircraft Engineering — Systems Engineer (2018–2023)

- Full-stack systems engineering background
 - Distributed systems and real-time safety-critical software
 - Transitioned to AI/ML infrastructure development
-

Technical Skills

Languages: Python, TypeScript/JavaScript, Rust, Kotlin, Swift, SQL **AI/ML:** PyTorch, scikit-learn, ONNX, MLX, Ollama, vLLM, llama.cpp **Infrastructure:** FastAPI, Next.js, Docker, Kubernetes, Tauri, Capacitor **Distributed Systems:** mDNS/Bonjour mesh networking, speculative decoding, MCP/A2A protocols **Safety:** Red team auditing, guardrails engineering, neural threat detection, SOC2 preparation **DevOps:** CI/CD, automated testing, log analytics, cost tracking

Key Projects

MEOKCLAW Sovereign Platform (github.com/meokclaw)

- Multi-model AI council with 47 specialized agents
- 8-node operational mesh (M4 + M2 + Vast.ai + OpenRouter)
- Semantic cache with nomic-embed-text (20–40% cost reduction)
- Circuit breaker and observability with per-request cost tracking
- 6-language QuantMan E2E validation (EN/ES/FR/AR/JA/ZH)

SOV3 Neural Core

- care_validation_nn: 449 episodes, MSE 0.0007
 - threat_detection_nn: 212 episodes, MSE 0.0005
 - partnership_detection_ml: 100 episodes, MSE 0.0006
 - Real-time drift detection with baseline comparison
-

Education

Aircraft Engineering — Systems focus Self-taught in machine learning, distributed systems, and AI safety

Publications & Talks

- *Maternal Covenant: Care-Aligned AI Architecture* — MEOK AI LABS whitepaper
 - *Byzantine Council Consensus for Multi-Model AI* — Technical specification
 - Regular strategic assessments on sovereign AI and decentralised infrastructure
